3rd Level Faculty of Computers and Information	Web Programming Sheet # 4 13-3-2024

Question 1:

Consider the following two screenshots of Webpages that sells flowers “bouquets”. Design similar ones using HTML, CSS. Using CSS has high priority in the webpage design. Do not try to design the page using HTML only. The needed images are included in attached folder. Anything in the webpage that is not found in the image folder is a text. Take care of the text/image that appears over an image. Do not collect many images in a single image. **Use CSS to divide the page. Do not divide the page using tables.** You have to take the following into consideration while you design the pages

a)The background and text color of the items in the menu

and

button that appear in the pages snapshots are changed when the mouse passes over them as shown

b) The flowers “bouquets” and the text below them are links have the illustrated style in the pages snapshots “no border, not underlined,…” and do not change their style when the mouse passes over them
